

accurision®

Join Accurision to drive innovation in the field of robust, high-precision, satellite-based positioning for autonomous vehicles. We are looking for a highly motivated software engineer with technical fundamentals in embedded software development who is passionate about building technology that serves our customers.

Embedded Software Engineer (f/m)

Accurision requires a self-motivated individual to help design and implement the embedded software for our advanced GNSS sensors. You will drive innovation in the embedded software design and collaborate closely with other GNSS team members. You will help develop the next generations of robust, high accuracy, and high availability positioning solutions.

Tasks

- Design and development of the embedded software of our GNSS sensors
- Analysis and continuous optimisation of the existing embedded software to increase stability, scalability, maintainability, testability and quality
- Automation of complete execution from development to system test and KPI analysis
- Software design, implementation, testing and documentation

Skills & experience

- A University or University of Applied Sciences degree in Electronic Engineering or Computer Science with 5+ years of professional experience or comparable education/professional experience
- In-depth expertise in embedded software development using C and C++
- Highly skilled in scripting (TCL and/or Python)
- Good aptitude for problem solving and logical reasoning
- High proficiency in English, German is a plus

Bonus points

- Knowledge of ARM/Xilinx
- Experience with GNSS (BeiDou, Galileo, GPS)

Our offer

- Exciting and challenging tasks in the field of GNSS for autonomous vehicles
- Opportunity to play a decisive role in the development of our GNSS sensor platform
- Small/international team

We look forward to receiving your application by email at: katja.blum@accurision.com

Compulsory note: The actual salary is above the Austrian IT collective agreement and is based on skills and experience.
